Abstract

The final project for the Data Management and Database Design course is creating and designing a database for all the Active Clinical Trials (ACT) in USA. The Database will store clinical trials and outcomes through data modelled around a complex relationship of multiple entities.

A pharma company houses a Clinical Trial for one or more of their new drugs. This is a multi-step process which is based on the research carried out by the scientists and administered to the patients under the supervision of the doctors. The test samples are unique for every patient and form the basis of whether the drug passes the clinical trial or not.

Moreover, the database also gives a geographical context of where the companies are conducting trials in USA by keeping a track of the state wise clinical trials. The Estimated cost of every trial logged in by the database gives an idea as to which company is spending how much and on what drug.

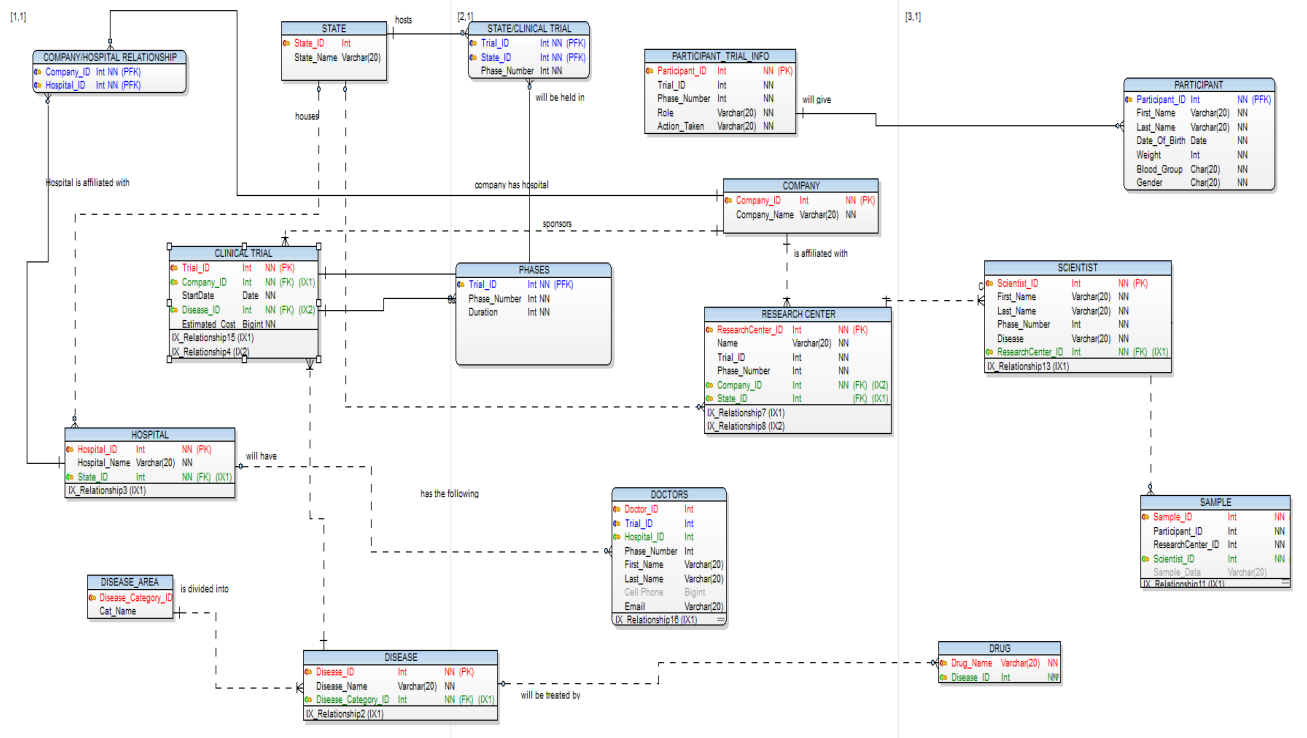

Ultimately, this database is modelled to aid regulatory professionals, medical practitioners and clinical research investigators for evidence based decision making or perhaps as a tool in getting clinical trial information.

Application Software used- MySQL

Problem Statement-

- A COMPANY can conduct multiple clinical trials.
- A CLINICAL TRIAL has multiple PHASE.
- Each PHASE has many PARTICIPANTS.
- A PARTICIPANT can be either a patient or a volunteer.
- Each PARTICIPANT will have one SAMPLE.
- One SCIENTIST can take multiple SAMPLE of the PARTICIPANT.
- Each RESEARCH CENTER will have multiple SCIENTISTS working in it.
- Each RESEARCH CENTER will have one CLINICAL TRIAL.
- Each DOCTOR will work in a HOSPITAL.
- Each HOSPITAL will be there in some STATE on USA and can be affiliated with one or more biopharma COMPANY.
- Every COMPANY will have a RESEARCH CENTER affiliated with it.
- There are many DISEASE AREAs under which the research of a DRUG for a DISEASE might fall.

EER Diagram-

The entities in this EER diagram are-

1. Company- biopharma company which sponsors one or more clinical trial.
2. Clinical Trial- It is the process done before the drug can be approved for market.
3. Phase- it is the state of the clinical trial. It can either be 1,2 or 3.
4. Scientist- he is a person who takes a sample of the participant vitals.
5. Participant- can be a patient or a healthy volunteer.
6. Participant Trial Info- log of all the details of a participant pertaining to a trial.
7. Disease Area- it is the category within which a disease can fall.
8. Disease- it is the disease for which clinical trials take place.
9. Drug- it is the drug for a disease which is under a clinical trial.
10. Hospital- it is the place where doctors will carry out tests on participants.
11. State- it is the state in USA.
12. Research Center- it is the place where the scientist will take the sample and do research.

There are two bridge tables which will log all the information of the two M:N relationships in the EER diagram.

Views

1. Disease and Disease area view

```

1  /*Disease and Disease areas view */
2  • select Disease_ID, Disease_Name, concat_ws(' ', Cat_Name) as Category
3     from disease as d, disease_areas as da
4     where d.Disease_Category_ID=da.Disease_Category_ID
5     order by Disease_ID;

```

Disease_ID	Disease_Name	Category
4	Diabetes	Cardiovascular and Metabolic Disease
5	Obesity	Cardiovascular and Metabolic Disease
6	Parkinsons	Neuroscience
7	Alzheimers	Neuroscience
8	Hematologic	Rare Disease
9	Neuromascular	Rare Disease
10	AIDS	Vaccines
11	Hep C	Vaccines
12	Skin Cancer	Oncology
13	Breast Cancer	Oncology
14	Prostate Cancer	Oncology

2. Overview of all the Trials and the diseases they are on along with company names and cost

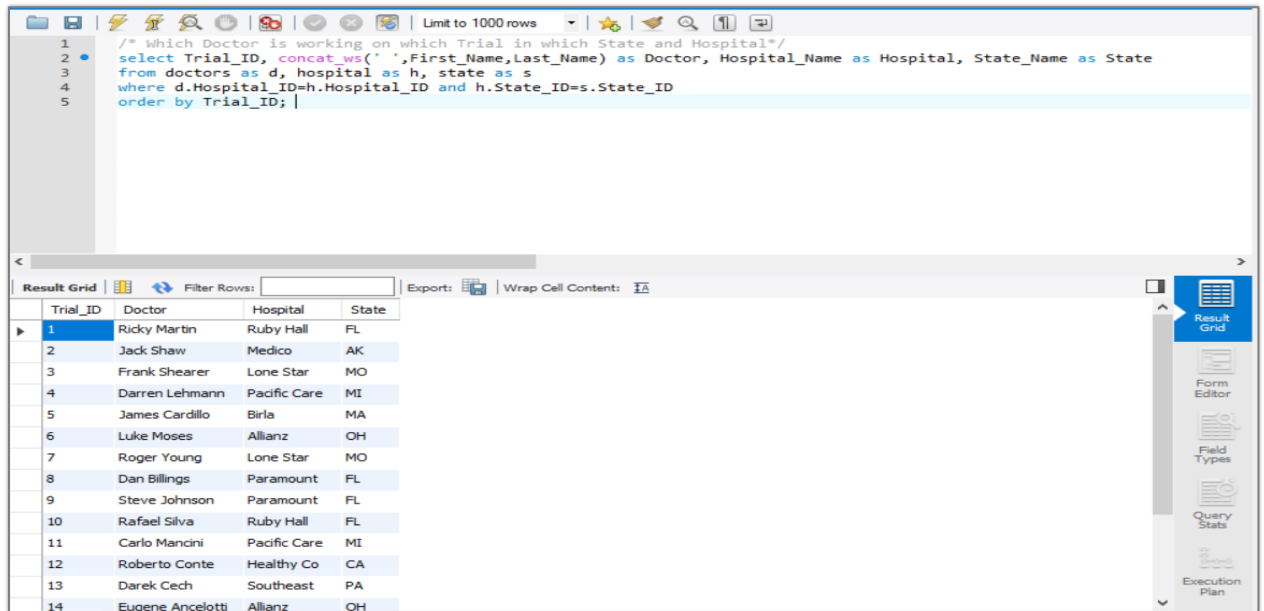

```

1  /* Overview of all the Trials and the diseases they are on along with company names and costs */
2  • select Trial_ID, Company_Name, Disease_Name, Cat_Name, Estimated_Cost
3     from clinical_trial as ct, company as co, disease as d, disease_areas as da
4     where ct.Company_ID=co.Company_ID AND ct.Disease_ID=d.Disease_ID AND d.Disease_Category_ID= da.Disease_Category_ID
5     order by Trial_ID;

```

Trial_ID	Company_Name	Disease_Name	Cat_Name	Estimated_Cost
1	Merck	GastroEnterology	Inflammation and Immunology	2500
2	Pfizer	Prostate Cancer	Oncology	2521
3	Regeneron	Rheumatology	Inflammation and Immunology	3450
4	Novartis	Obesity	Cardiovascular and Metabolic Disease	4531
5	Sanofi	Skin Cancer	Oncology	2580
6	Biogen	Parkinsons	Neuroscience	2000
7	GSK	Hep C	Vaccines	3000
8	Vertex	Alzheimers	Neuroscience	3100
9	Johnson & Johnson	Rheumatology	Inflammation and Immunology	2300
10	Sanofi	Neuromascular	Rare Disease	3245
11	Biogen	Neuromascular	Rare Disease	3465
12	Regeneron	Medical Dermatol...	Inflammation and Immunology	4000
13	Amgen	Medical Dermatol...	Inflammation and Immunology	4200
14	Vertex	Parkinsons	Neuroscience	3489
15	Johnson & Johnson	Alzheimers	Neuroscience	2690
16	Merck	Diabetes	Cardiovascular and Metabolic Disease	2500
17	Pfizer	AIDS	Vaccines	2800
18	GSK	GastroEnterology	Inflammation and Immunology	3100

3. Which Doctor is working on which Trial in which State and Hospital

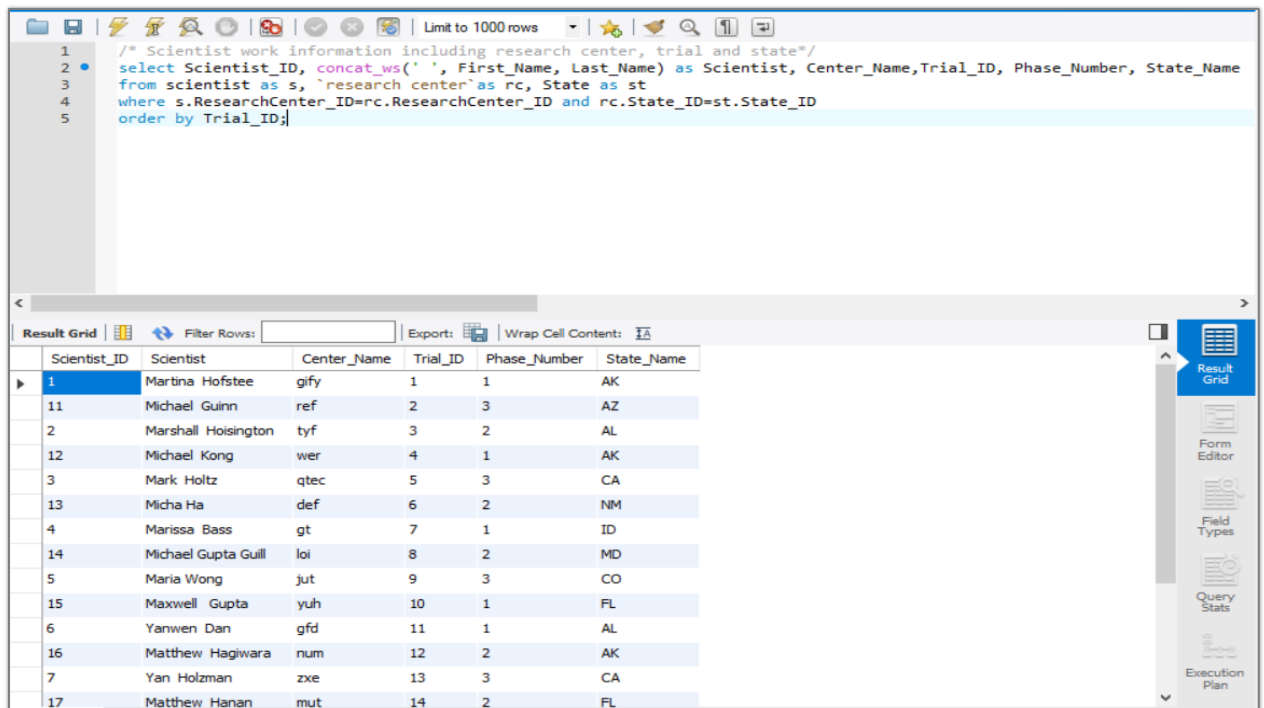

```

1  /* Which Doctor is working on which Trial in which State and Hospital*/
2  select Trial_ID, concat_ws(' ', First_Name, Last_Name) as Doctor, Hospital_Name as Hospital, State_Name as State
3  from doctors as d, hospital as h, state as s
4  where d.Hospital_ID=h.Hospital_ID and h.State_ID=s.State_ID
5  order by Trial_ID;

```

Trial_ID	Doctor	Hospital	State
1	Ricky Martin	Ruby Hall	FL
2	Jack Shaw	Medico	AK
3	Frank Shearer	Lone Star	MO
4	Darren Lehmann	Pacific Care	MI
5	James Cardillo	Birila	MA
6	Luke Moses	Allianz	OH
7	Roger Young	Lone Star	MO
8	Dan Billings	Paramount	FL
9	Steve Johnson	Paramount	FL
10	Rafael Silva	Ruby Hall	FL
11	Carlo Mancini	Pacific Care	MI
12	Roberto Conte	Healthy Co	CA
13	Darek Cech	Southeast	PA
14	Euene Ancelotti	Allianz	OH

4. Scientist work information including research center, trial and state

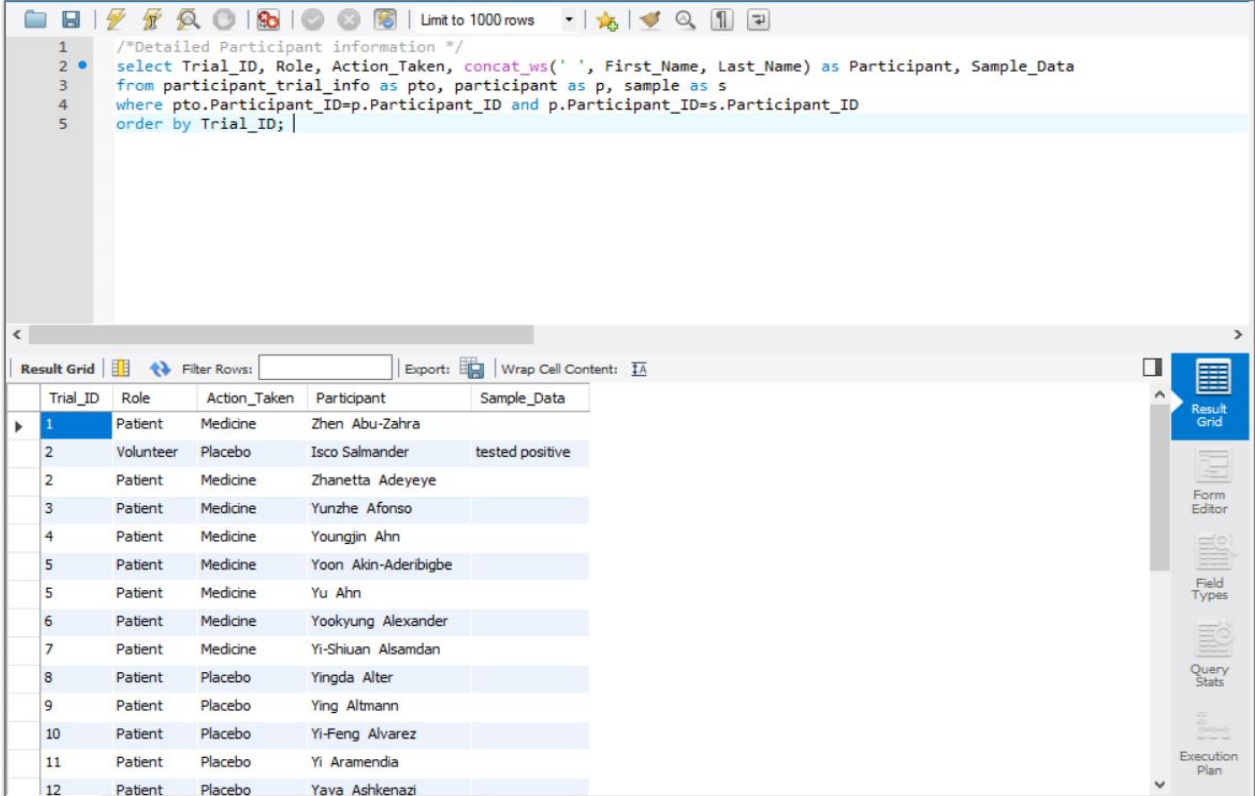

```

1  /* Scientist work information including research center, trial and state*/
2  select Scientist_ID, concat_ws(' ', First_Name, Last_Name) as Scientist, Center_Name, Trial_ID, Phase_Number, State_Name
3  from scientist as s, 'research center' as rc, State as st
4  where s.ResearchCenter_ID=rc.ResearchCenter_ID and rc.State_ID=st.State_ID
5  order by Trial_ID;

```

Scientist_ID	Scientist	Center_Name	Trial_ID	Phase_Number	State_Name
1	Martina Hofstee	gify	1	1	AK
11	Michael Guinn	ref	2	3	AZ
2	Marshall Hoisington	tyf	3	2	AL
12	Michael Kong	wer	4	1	AK
3	Mark Holtz	qtec	5	3	CA
13	Micha Ha	def	6	2	NM
4	Marissa Bass	gt	7	1	ID
14	Michael Gupta Guill	loi	8	2	MD
5	Maria Wong	jut	9	3	CO
15	Maxwell Gupta	yuh	10	1	FL
6	Yanwen Dan	gfd	11	1	AL
16	Matthew Hagiwara	num	12	2	AK
7	Yan Holzman	zxe	13	3	CA
17	Matthew Hanan	mut	14	2	FL

5. Detailed Participant information

The screenshot shows a database query editor with a SQL query and its results. The query is as follows:

```

1  /*Detailed Participant information */
2  select Trial_ID, Role, Action_Taken, concat_ws(' ', First_Name, Last_Name) as Participant, Sample_Data
3  from participant_trial_info as pto, participant as p, sample as s
4  where pto.Participant_ID=p.Participant_ID and p.Participant_ID=s.Participant_ID
5  order by Trial_ID;

```

The results are displayed in a grid with the following columns: Trial_ID, Role, Action_Taken, Participant, and Sample_Data. The data is as follows:

Trial_ID	Role	Action_Taken	Participant	Sample_Data
1	Patient	Medicine	Zhen Abu-Zahra	
2	Volunteer	Placebo	Isco Salmander	tested positive
2	Patient	Medicine	Zhanetta Adeyeye	
3	Patient	Medicine	Yunzhe Afonso	
4	Patient	Medicine	Youngjin Ahn	
5	Patient	Medicine	Yoon Akin-Adenbigbe	
5	Patient	Medicine	Yu Ahn	
6	Patient	Medicine	Yookyung Alexander	
7	Patient	Medicine	Yi-Shiuan Alsamdan	
8	Patient	Placebo	Yingda Alter	
9	Patient	Placebo	Ying Altmann	
10	Patient	Placebo	Yi-Feng Alvarez	
11	Patient	Placebo	Yi Aramendia	
12	Patient	Placebo	Yava Ashkenazi	

Stored Procedures-

- For finding which Drugs are produced by a company-
 create procedure Company_Drug(In CN varchar(30))
 begin
 select d.Drug_Name,c.Company_Name,d.disease_name from company c
 join
 drug d
 on d.Company_ID=c.Company_ID
 where CN=c.Company_Name;
 end //

Call Company_Drug ()

```

2
3
4
5 Delimiter //
6 • create procedure Company_Drug( In CN varchar(30))
7   begin
8     select d.Drug_Name,c.Company_Name,d.disease_name from company c
9     join
10    drug d
11    on d.Company_ID=c.Company_ID
12    where CN=c.Company_Name;
13  end //
14
15 • call Company_Drug('sanofi')
  
```

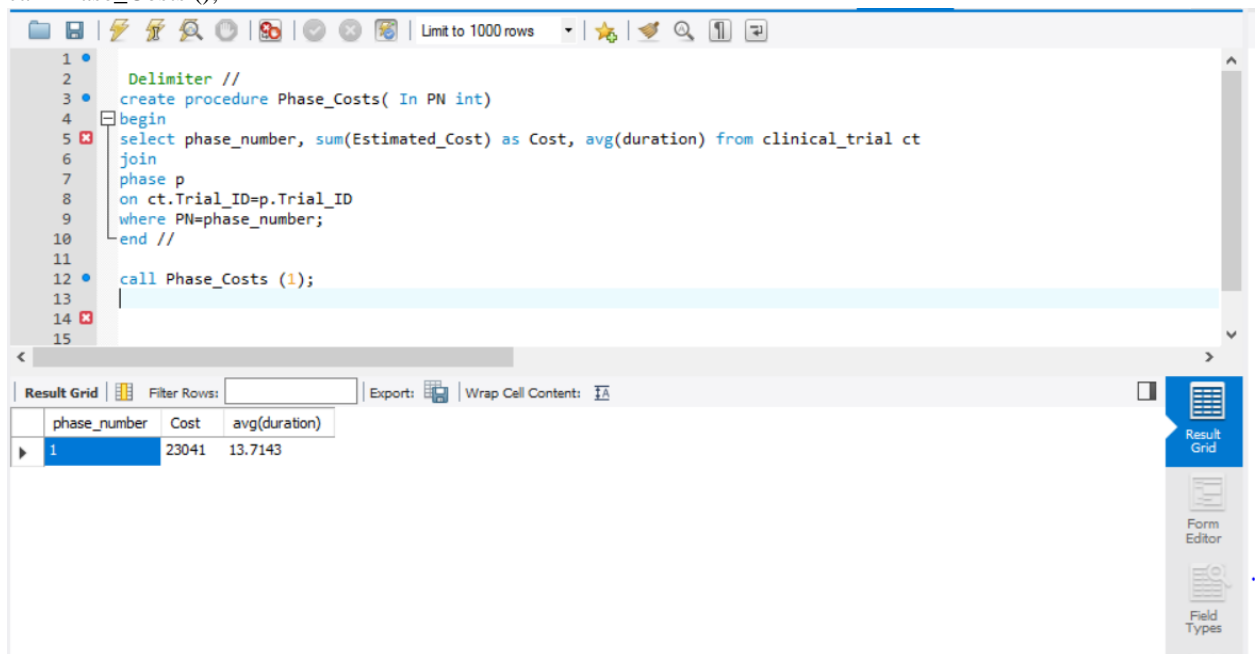

Result Grid | Filter Rows: | Export: | Wrap Cell Content: |

	Drug_Name	Company_Name	disease_name
▶	B	Sanofi	GastroEnterology
	K	Sanofi	Hep C

2. For finding cost for a particular phase and the average time for a particular phase-
 Delimiter //
- ```

create procedure Phase_Costs(In PN int)
begin
select phase_number, sum(Estimated_Cost) as Cost, avg(duration) from clinical_trial ct
join
phase p
on ct.Trial_ID=p.Trial_ID
where PN=phase_number;
end //
call Phase_Costs ();

```

## Triggers-

1. To find out the age of the participants when a new participant is added-  
Delimiter //

```
CREATE TRIGGER `New_Entry`
before
INSERT
ON `Participant`
FOR EACH ROW
BEGIN
set new.Age= TIMESTAMPDIFF(YEAR,new.Date_Of_Birth,CURDATE());
END //
```

The screenshot shows the MySQL Workbench interface. The SQL editor contains the following SQL code:

```
1 SELECT * FROM finaldbproject.participant;
2 Delimiter //
3 CREATE TRIGGER `New_Entry`
4 before
5 INSERT
6 ON `Participant`
7 FOR EACH ROW
8 BEGIN
9 set new.Age= TIMESTAMPDIFF(YEAR,new.Date_Of_Birth,CURDATE());
10 END //
11
12
13
14 SELECT * FROM finaldbproject.participant;
```

The result grid displays the following data:

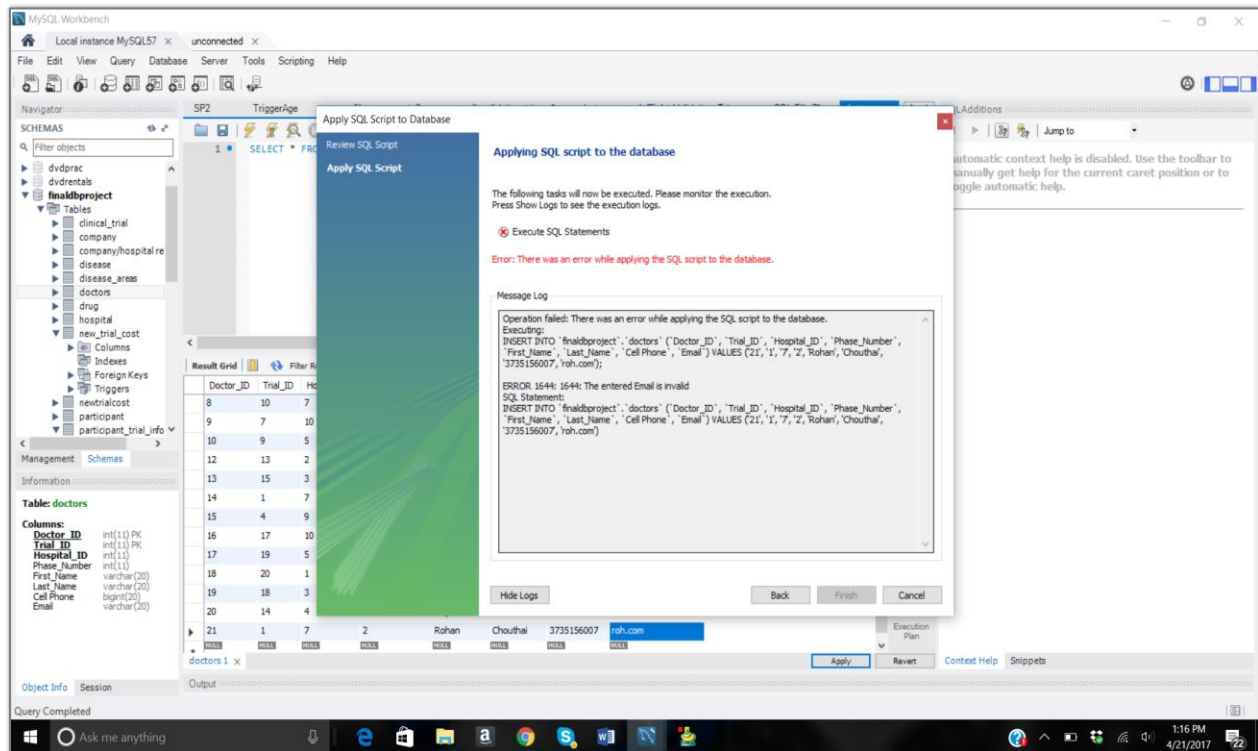

| Participant_ID | First_Name | Last_Name | Date_Of_Birth | Weight | Blood_Group | Gender | Age  |
|----------------|------------|-----------|---------------|--------|-------------|--------|------|
| 22             | Wan        | Barnes    | 1959-08-22    | 68     | O+          | M      | 1000 |
| 23             | William    | Barnett   | 1959-09-06    | 54     | A-          | M      | 1000 |
| 24             | Willem     | Saxter    | 1976-12-06    | 63     | O-          | F      | 1000 |
| 25             | William    | Saxter    | 1968-10-09    | 80     | AB-         | F      | 1000 |
| 27             | Wayne      | Bedrakis  | 1956-09-04    | 70     | AB-         | M      | 1000 |
| 28             | Vivek      | Bestegui  | 1980-11-13    | 80     | AB+         | M      | 1000 |
| 29             | Vacheslav  | Benchmol  | 1997-02-22    | 96     | B-          | F      | 1000 |
| 30             | Isco       | Salmander | 1973-10-19    | 54     | A-          | F      | 1000 |
| 36             | Wei        | Beatty    | 1967-03-27    | 51     | O+          | M      | 1000 |
| 37             | B          | C         | 2000-01-01    | 50     | A+          | M      | 17   |
| 38             | X          | Y         | 1995-02-09    | 30     | A+          | F      | 22   |
| 39             | P          | Q         | 2000-02-06    | 50     | A-          | F      | 17   |

The interface also shows the 'Schemas' pane on the left with a tree view of databases and tables, and the 'Table: doctors' structure in the bottom left pane.

2. To validate the email address –
 

```
CREATE TRIGGER `email_validation`
BEFORE
INSERT
ON `DOCTORS`
FOR EACH ROW
BEGIN
 if new.Email not like '%_@%_._%'
 then
 signal sqlstate value '45000'
 set message_text = 'The entered Email is invalid';
 end if;

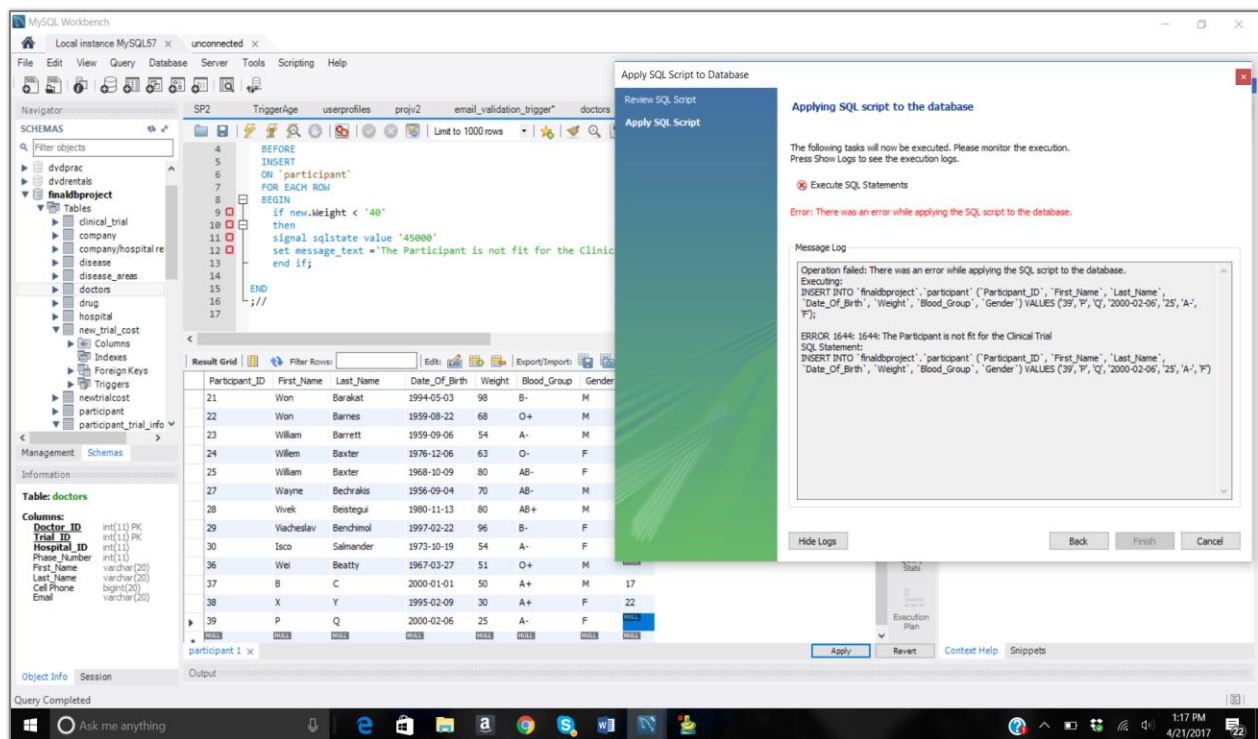

END
; //
```

3. To validate the weight of the Participant-delimiter //

```
CREATE TRIGGER `Weight_validation`
BEFORE
INSERT
ON `participant`
FOR EACH ROW
BEGIN
 if new.Weight < '40'
 then
 signal sqlstate value '45000'
 set message_text ='The Participant is not fit for the Clinical Trial';
 end if;

END
; //
```

---

## User Profiles-

1. create user Scientist identified by 'mysample';

Grant update on finaldbproject.Sample to Scientist;

Grant insert on finaldbproject.Sample to Scientist;

2. create user DataBase\_Admin identified by 'admin';

grant all on finaldbproject.\* to DataBase\_Admin;

Dump file-
